

Java Assignment

Question:- Create one Doctors appointment form by Entering patients details like Name, Age, DOB, Blood Group, Address, Mobile Number, Email, Date of Appointment and upload **patient reports in PDF format**.

The PDF file should be stored in folder in Server/Local System. (You decide the path structure)

And you have to store the proper folder structure path in database. (This is Patient appointment availability form).

Please make sure that UI should be attractive and easy to use.

Insert these details in Mysql with proper database structure and table format.

If the doctor is available on the requested date then the confirmation mail should receive by the patient by the Doctor.

Complete this assignment by using MVC

All the Best for your Test,

Thanks & Regards,
